

electrospinning process nanofiber research pdf

Electrospinning is a fiber production method which uses electric force to draw charged threads of polymer solutions or polymer melts up to fiber diameters in the order of some hundred nanometers. Electrospinning shares characteristics of both electro spraying and conventional solution dry spinning of fibers. The process does not require the use of coagulation chemistry or high temperatures to ...

Electrospinning - Wikipedia

History of nanofiber production. Nanofibers were first produced via electrospinning more than four centuries ago. Beginning with the development of the electrospinning method, English physicist William Gilbert (1544-1603) first documented the electrostatic attraction between liquids by preparing an experiment in which he observed a spherical water drop on a dry surface warp into a cone shape ...

Polymeric Nanofibers in Air Filtration Applications

1. Introduction. Electrospinning of polymer solutions has been extensively used in the last years to produce polymeric fibers of nano-dimensions 1-6. New companies based on this process, like eSpin Technologies, Nanotechnics and Kato Tech emerged in the last years while companies like Donaldson and Freudenberg have been using electrospun fibers for the last two decades 7.
