Eric Richard Kandel (German: ; born November 7, 1929) is an Austrian-American medical doctor who specialized in Psychiatry, a neuroscientist and a University Professor of biochemistry and biophysics at the College of Physicians and Surgeons at Columbia University. He was a recipient of the 2000 Nobel Prize in Physiology or Medicine for his research on the physiological basis of memory storage ...

Neural precursors in sponges. Sponges have no cells connected to each other by synaptic junctions, that is, no neurons, and therefore no nervous system. They do, however, have homologs of many genes that play key roles in synaptic function. Recent studies have shown that sponge cells express a group of proteins that cluster together to form a structure resembling a postsynaptic density (the ...

Nel 1974 Kandel prende il posto di Harry Grundfest alla Columbia University, fonda il Center for Neurobiology and Behavior e nel 1983 diventa professore della stessa Università. Sempre in quegli anni entra a far parte di importanti associazioni quali la National Academy of Sciences USA, del National Institute of Medicine e l'American Academy of Art and Sciences.

Eric Richard Kandel (\* 7. November 1929 in Wien) ist ein US-amerikanischer Psychiater, Physiologe, Neurowissenschaftler, Verhaltensbiologe und Biochemiker österreichischer Herkunft. Er wurde im Jahr 2000 mit dem Nobelpreis für Physiologie oder Medizin ausgezeichnet.

### **Eric Kandel – Wikipedia**

A neuron, also known as a neurone (British spelling) and nerve cell, is an electrically excitable cell that receives, processes, and transmits information through electrical and chemical signals. These signals between neurons occur via specialized connections called synapses. Neurons can connect to each other to form neural pathways, and neural circuits.

### **Neuron - Wikipedia**

The cell bodies of some PNS neurons, such as the motor neurons that control skeletal muscle (the type of muscle found in your arm or leg), are located in the CNS.

Introduction. Learning and memory models suggest that modulation by subcortical inputs may stabilize Hebbian homosynaptic plasticity to permit long-lasting changes in synaptic strength and that these dynamic changes are the substrates for learning and memory (Bailey et al., 2000, Hunt et al., 2013). Monoamines—predominantly serotonin (5-HT), dopamine, and norepinephrine—constitute the main ...
