A two-port network (a kind of four-terminal network or quadripole) is an electrical network or device with two pairs of terminals to connect to external circuits. Two terminals constitute a port if the currents applied to them satisfy the essential requirement known as the port condition: the electric current entering one terminal must equal the current emerging from the other terminal on the ...

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

These operators will operate on a wave function, Y, which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system. We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.

Die Permittivität des Vakuums ist eine Naturkonstante. Im Vakuum besteht zwischen der magnetischen Feldkonstanten, der Permittivität des Vakuums und der Vakuumlichtgeschwindigkeit folgender Zusammenhang: = Im Internationalen Einheitensystem (SI) geschieht die Rückführung der elektromagnetischen auf die mechanischen Größen in der Definition der Stromstärke.
